Stay Cool, Stay Warm and Stay Green:
Discover the Future of Energy-Efficient
Air Conditioning

■ About Us

Stay comfortable all year round with modern air conditioning from GrenTec Renewables, designed to keep your home cool in summer and warm in winter. Installed by fully accredited F Gas and Refcom engineers, our systems also improve air quality and energy efficiency for a healthier, more comfortable living space.

As trusted local specialists across Worthing, Horsham and Pulborough, we deliver reliable, high quality installations tailored to your home with honest advice and complete peace of mind.

Installation

Maintenance

Breakdown

■ We are F-Gas registered

Any business that carries out the installation or servicing of refrigeration, air-conditioning or heat pump equipment that contains, or is designed to prevent, F-Gas refrigerants, then by law, must obtain an F-Gas company certificate.

■ How does air conditioning work?

Air conditioning units work by removing warm air from inside your home and pumping it outside, while releasing cool air back into the room to reduce the temperature.

When the liquid becomes gas, it absorbs heat; in principle, this is how it functions.

■ Our Services

01

Installation - Cool off in the summer, or warm up when it's chilly, with air conditioning that keeps you comfortable, whatever the weather outside. With a Worcester Bosch home air conditioning unit, you'll breathe easier too – with cleaner, filtered, circulated air, whenever you need it.

02

Maintenance - Regular maintenance of air conditioning units is crucial for their efficiency and longevity. Over time, dust and debris can hinder performance and affect air quality. Routine checks involve cleaning filters, inspecting coils, and ensuring drain channels are clear.

03

Breakdown - Breakdowns in air conditioning units can stem from wear and tear, poor maintenance, or factory defects, leading to issues like refrigerant leaks or electrical failures. When a unit exhibits signs of trouble, it's crucial to consult a professional quickly. Timely intervention can prevent extensive damage, prolong the unit's life, and maintain indoor comfort.

■ Residential

Worcester Bosch air conditioning & heating units are designed to be as quiet and unobtrusive as possible, so it's easy to forget they're even there. They were built with two operating modes: heating and cooling.

This means that on a warm summer evening, you'll get the perfect night's sleep thanks to the comfortable, cool air of Worcester Bosch air conditioning. Their heating mode also means you can use them all year round by switching to heat, perfect for those winter months.

■ Commercial

Installing comfortable cooling/heating systems is their bottom line, as research shows that productivity can increase by up to 20% due to improved concentration, health, and general well-being among employees.

People perform less effectively and less efficiently in extreme temperatures. When temperatures are too low, concentration levels fall. We can offer a complete service to help you decide on the best air conditioning system for your requirements.

The benefits

There are several benefits to having a new air conditioning system installed; whether your air conditioning unit is placed in a domestic or commercial setting, here are just some reasons why you should have a unit installed:

Numerous health benefits and cleaner air

Air conditioning ventilates and circulates throughout your home, drawing fresh air from outdoors and filtering it indoors.

Warm up or cool down

Air conditioning and heating can maintain a pleasant environment, whether summer or winter, without you having to do anything.

Ease of use

The controls for your unit are designed to be simple to operate, and making adjustments to temperature is just one click away.

Control your allergies

With built-in air filters, our air conditioning units remove almost all dust, smoke, pollen, and other allergens so you can breathe easier.

"Energy efficiency rating of A++ for cooling and A+ for heating."

FAQ's

Opposite is some standard frequently asked questions with answers. Should you have any further questions, please call 07738950744.

What is the advantage of choosing an energy-efficient air conditioning & air heating unit?

The primary advantage is that these units use less energy, reducing your carbon footprint and saving you money on your energy bills. Additionally, you can benefit from 0% VAT on the installation of your new energy-efficient unit.

Are you F-GAS registered?

Yes, by choosing F-GAS-registered engineers, you ensure that the individuals installing and maintaining your unit are fully qualified and compliant with the latest industry and environmental standards.

What guarantee is available?

You can get up to a 5-year guarantee on your new energy efficient air conditioning unit

Are you accredited?

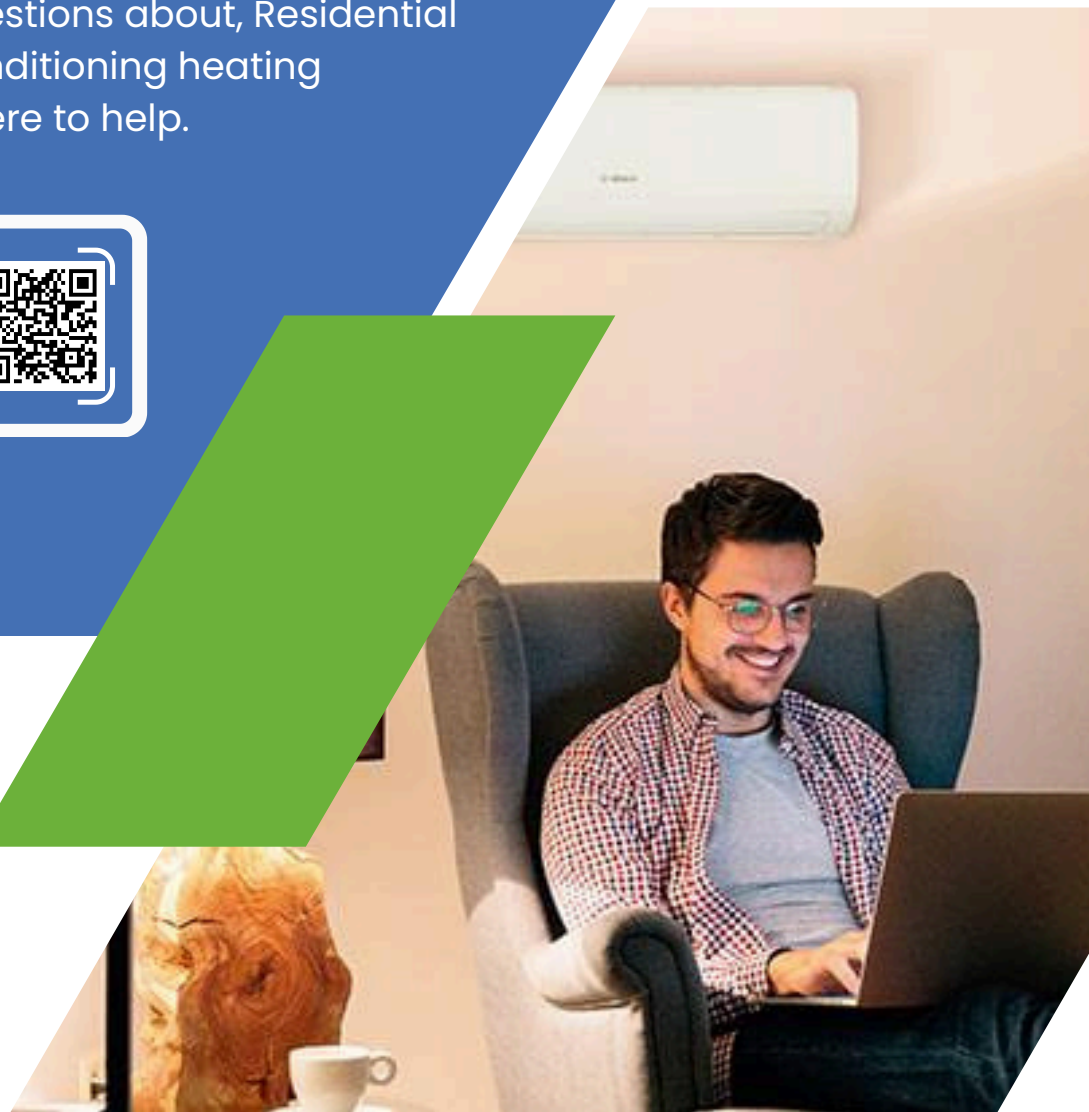

Yes, we are a Worcester Bosch accredited installer that can offer a range of exclusive benefits, including extending guarantees.

Do they make lots of noise?

We know that a good night's sleep is the reason that many homeowners install air conditioning, so we have also made sure that our systems are as quiet as possible too.
